Facilities Information and Management **challenge...**

Facilities are strategic resources that need to be integrated with corporate mission critical applications. Planning, designing and maintaining facilities involves many decision-makers and thousands of documents. Each needs accurate and up-to-date information. Traditional approaches for managing these processes are expensive and inefficient. Drawings and documents are physically exchanged using courier services. Designers interact by sending marked-up drawings. In addition, regulators and inspectors require timely compliance data and documentation.

The *iDrawings* solutions...

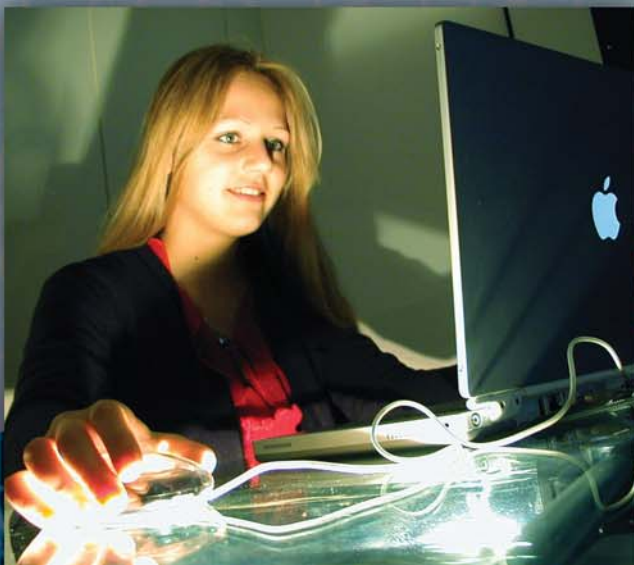

iDrawings is a set of software tools and services based on advanced communications and Web technologies. They enable organizations to manage their facilities right from their desktop or from remote locations. Drawings, documents and data are shared instantaneously among decision-makers, project managers, engineers, architects and vendors. It is a highly cost effective solution that allows organizations to manage geographically dispersed project teams, drawings and documents and physical assets. *iDrawings* expands an organization's capability to integrate and share facility information with a broad set of stakeholders, without incurring expensive investments in a variety of CAD and database systems. *iDrawings* integrates drawings and various facility databases in a common organized repository.

- Web-based portal to store, retrieve and distribute drawings, data and reports
- Drawing-centric project collaboration via the Web
- Easy, controlled, and secure browser based access for all users
- Hosted on the Internet or private Intranets
- Real-time decision making

Major capabilities

iDrawings provides functional capability that enables you to effortlessly access and manage enterprise drawings, documents, and facility data on the web. Major modules include:

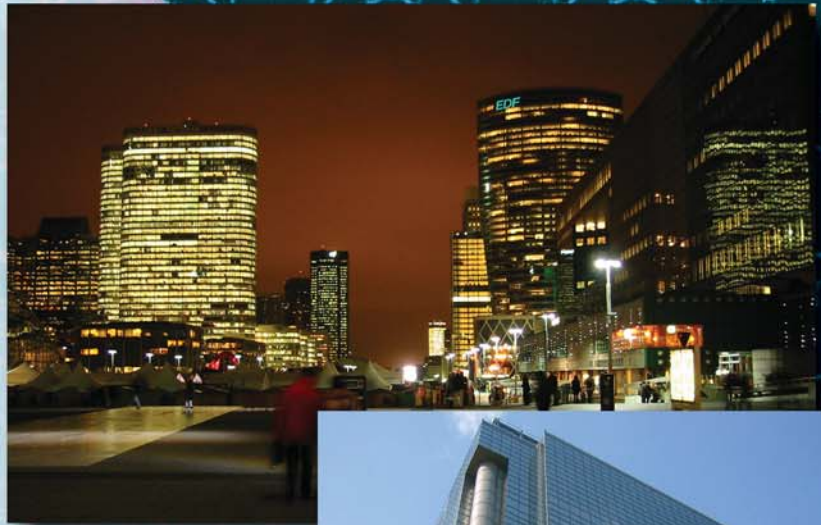

- **As-Builts Module** – the core repository of drawings;
- **Space Module** for managing and reporting on the detailed allocation and use of space among cost centers;
- **Employee Module** for organizing and managing space usage and employee moves;
- **Projects Module** for tracking facility re-modeling and modifications;
- **Asset Module** for managing a broad set of corporate assets;
- **Telecom Module** for managing telecom and network assets;
- **PDA Module** for working with drawings and data on a wireless hand held device.

Internet Model

The easiest and least expensive way to enjoy the benefits of **iDrawings** is to sign up for **iDrawings.com** maintained by Indus Systems. You need no special software and there are no web servers to be maintained by your staff. Sign up now and authorize access for your employees, consultants and contractors, who can then immediately start enjoying the power of **iDrawings**.

- Site maintained by Indus Systems
- Segregated, secure accounts
- Unlimited access
- Client managed access control
- Fixed fee

Intranet Model

Set up **iDrawings** on your own private Intranet. Indus supplies all software, consulting, and system integration to get your system going. Structure the system to suit your organizational style. Build one common facilities management system to suit your organizational style. Build one common facilities management system to provide a consolidated facility applications environment for all your divisions and departments.

- Hosted on your private Intranet
- Indus supplied software tools and components
- Client managed accounts and access control

Indus end-to-end services

With hundreds of customers nationwide, Indus Systems has established itself as a leading provider of facility drawing services, applications and information systems. As the Web infrastructure continues to expand, Indus continues to lead its clients to new web-based solutions that provide unprecedented effectiveness and cost-efficiencies through a full range of services.

- CAD drawings generation and management
- Field verification and validation
- Web-based drawing and data dissemination and maintenance
- Financial, Government, and regulatory reports
- Compliance documentation
- Requirements-based customization
- Facilities management systems implementation

iDrawings Services

- **iDrawings.com** hosting drawings and facility data on the WWW
- Support for **iDrawings** software on private intranets.

Collaborative Facility Management @ Internet Speed

Facility information in a 'real-time' shared environment...

- Web-based facilities database enables real-time collaborative facility design, development, and reviews...
